                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention describes a fusion protein comprising at least one amino acid sequence of immunogenic portions of any of the 3 sequences not defined in the specification, or sequences having at least 70 or 90 % sequence identity to any one of the 35 sequences defined in the USPTO web site, which is encoded by any of the 4 nucleotide sequences not defined in the specification. The fusion protein, composition and methods are useful for diagnosing, preventing and/or treating cancer, particularly prostate cancer. The proteins are useful as markers to indicate the presence or absence of cancer. This sequence represents a prostate cancer therapy associated cDNA. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the US patent office at

from the tissues of various organisms such as humans or other mammals (e.g. mice, sheep and dogs). The methods of the invention are useful for diagnosing and treating prostate cancer in mammals. The prostate cancer-associated genes are useful for diagnosing or treating prostate cancer, as well as for identifying modulators of prostate cancer or agents that inhibit prostate cancer. The nucleic acid sequences are particularly useful in gene therapy, as a vaccine or in antisense applications.

ABK92115-ABK92263 represent prostate cancer-associated polynucleotide The present invention relates to methods of detecting a prostate cancerassociated transcript in a cell from a patient. The method comprises
contacting a biological sample from the patient with prostate cancerassociated polynucleotides (designated PC genes) that selectively
hybridise to a sequence that is at least 80% identical to them. The
prostate cancer-associated polynucleotide sequences are differentially
expressed in prostate tumour tissue or in prostate cancer and are derived sequences

Sequence 1195 вP; 382 A; 221 C; 233 G; 359 T; 0 U; 0 Other;

The PSPs and their coding sequences are useful for stimulating an immune response in a patient, or for treating prostate cancer in a patient and for determining, detecting or diagnosing the presence of a cancer in a patient. The present sequence was used to illustrate the invention

                                                                                                  The invention relates to newly discovered cancer markers associated with CC the cancerous state of prostate cells. Also disclosed is a method of CC assessing whether a patient is afflicted with prostate cancer. The method CC of the invention involves assessing whether a patient is afflicted with CC prostate cancer by comparing the level of expression of a marker in a CC patient sample and the normal level of expression of the marker in a CC control non-prostate cancer sample, where a significant increase in the CC level of expression of the marker in the patient sample and the normal CC nucleic acids of the invention are useful for diagnosing or treating CC prostate cancer, and may be useful in gene therapy. Sequences given in CC ADB7517-ADB75631 represent marker cDNA and proteins. Note: The sequence CC data for this patent did not form part of the printed specification, but CC was obtained in electronic format directly from WIPO at CC tp. wipo.int/pub/published_pct_sequences.

The invention relates to an isolated polypeptide comprising no more than 11-542 amino acids of ADB13563 comprising a sequence ADB14487. The peptides comprise a fragment ADB13563 of that contain naturally processed T-cell epitopes for 3 class I major histocompatibility complex (MHC) alleles. ADB13563 is a polypeptide encoded by a human prostate specific cDNA, one of 648 disclosed as new. Also included are nucleic acids encoding the proteins and peptides, expression vectors, a host cell transformed with the vector, an isolated antibody (or antigen binding fragment) that specifically binds to the protein or peptide, detecting the presence of a cancer in a patient (comprising contacting a patient sample with a binding agent that binds to the peptides or a polypeptide appearing as ADB13558, detecting the amount of polypeptide that binds to

CC the agent and comparing the amount of polypeptide to a predetermined cut-
CC coff value to determine the presence of cancer), a fusion protein
CC comprising the peptides or proteins, stimulating or expanding T cells
CC specific for a tumour protein comprising contacting T cells with the
CC peptides or the isolated T cell population, treating prostate cancer in a
CC patient comprising administering a composition comprising the peptides,
CC cancer in a patient and treating prostate cancer in a patient comprising
CC from a patient with the peptides or antigen presenting cells that express
CC proliferated T cells to the patient. The peptides (or an oligonucleotide
CC proliferated T cells to the patient. The peptides (or an oligonucleotide
CC prosence of cancer in a patient. The peptides, nucleic acids encoding, or
CC stimulate or expand T cells specific for a tumour protein. The peptides,
CC nucleic acids, antibodies, fusion proteins, T cell populations or antigen
CC prostate cancer in a patient. The present sequence is a known cDNA
CC showing sequence similarity to one of the disclosed human prostate
CC specific cDNAs. Note: Except where otherwise indicated, the sequence data
CC obtained in electronic format directly from USPTO at
CC sequata.uspto.gov/sequence.html?DocID=20030185830.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                뫄
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    밁
                                          The present invention relates to a method of prognosticating metastasis in a breast cancer patient involves identifying differential modulation of each gene relative to the expression of the same genes in a normal population in combination of genes. The invention is useful for prognosticating breast cancer in a patient. The present sequence is human STEAP (six transmembrane epithelial antigen of the prostate) DNA used to illustrate the method of the invention
                                                                                                                                                                                                                                                                                              Prognosticating metastasis in a breast cancer patient comprises identifying differential modulation of each gene relative to the expression of the same genes in a normal population in combination
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         09-OCT-2003

                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a method for diagnosing cancer. The method comprising identifying differential modulation of each gene (relative to the expression of the same genes in a normal population) in a combination of genes. The method, diagnostic portfolio and the kit are useful in diagnosing cancer. The method may also be used for determining gene expression profiles. The present sequence is human STEAP (six transmembrane epithelial antigen of the prostate) DNA used to illustrate the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Diagnosing cancer comprises identifying differential modulation of gene (relative to the expression of the same genes in a normal population) in a combination of genes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Wang

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          B B

```

AK010437

1211 bp mRNA linear HTC 03-APR-2004 Mus musculus ES cells cDNA, RIKEN full-length enriched library, clone:2410007B19 product:six transmembrane epithelial antigen of the prostate, full insert sequence.

Euteleostomi;

Carninci,P., Shibata,Y., Hayatsu,N., Sugahara,Y., Shibata,K., Itoh,M., Konno,H., Okazaki,Y., Muramatsu,M. and Hayashizaki,Y. Normalization and subtraction of cap-trapper-selected cDNAs to prepare full-length cDNA libraries for rapid discovery of new genome Res. 10 (10), 1617-1630 (2000) Carninci, P. and Hayashizaki, Y.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Bos taurus (cow)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           (573)884-5552
Library construction (Standard Protocol): All procedures have been described in detail elsewhere (Soares et al., 1994; Bonaldo et al., 1996; Jiang et al., 2001). Total cellular RNA from each sample was isolated by using STAT-60 reagent (Tel-Test, Friendswood, TX) and the poly(A)+ RNA was obtained by two rounds of purification with the Oligotex mRNA isolation kit (Qiagen) according to the manufacturer's instructions. The libraries were constructed essentially as described by the manufacturer's instructions provided with the SuperScript Plasmid System (Invitrogen, cat. no. 18248-013). Briefly, Imcg of poly(A)+ RNA was annealed at c37 degrees with 10mcg of NotI-tag-dr18 oligonucleotide (GCTGCTGCGGCGCC-tag-T18) and reverse transcribed at c37 degrees with SuperScript II (Invitrogen) reverse transcribed at c37 degrees with SuperScript II of tag' represents a tissue/stage-specific ten-base sequence identifier
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              (573)882-0428
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        bovine@rnet.missouri.edu
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            selected and preovulatory; oviduct (days 0, and 5); endometrium (days 5, 8, 14, 16, 18 and 35); and placentra/embryo from day 35 conceptuses. Expanded descriptions of how the tissues were collected can be found at the following URL: http://genome.rnet.missouri.edu/Bovine/Methods.html.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     while not registered have known Angus pedigrees going bac at least 4 generations. Samples collected: The samples consisted of the following: germinal vesicle-stage occytes; in vitro derived embryos (2-cell, morula, lastocyst and nuclear transfer blastocyst; in vivo blastocyst and conceptuses (days 8, 14, 16 and 18); corpora lutea (days 3, 5, 8, 14, 16, 18 and 35); ovarian follicles (days 0, non-recruited, recruited, early respected and proportional control of the con
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Reproduction' to RS Prather(Primary Investigator), E Antoniou, HA Garverick, JA Green, MC Lucy, RM Roberts, Smith and RS Youngquist. Genetic Source: Heifers for the project were purchased from Circle A Ranch, Iberia, MO (http://www.circlearanch.com/home.html). These heifers.

After production of the library were pooled to produce a single mixed library (mega-library) for more extensive sequencing. Bioinformatics work was performed by GK Springer's bioinformatics work was performed by GK Springer's bioinformatics group in Computer Science at the University of Missouri DNA Core facility at: bovine@rnet.missouri.edu. Second strand synthesis was performed with 74 DNA polymerase in the presence of DNA ligase and RNase H. After second strand synthesis, the double-stranded cDNAs were ligated to Sall adapters (Invitrogen-Life Technologies) and digested with NotI. The cDNAs were size selected by passage through columns (Invitrogen-Life technologies). The cDNAs derived from each developmental stage of a particular tissue were mixed on an equimolar basis and ligated directionally into
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  the NotI and Sall sites of the pCMV-SPORT6 vector (Invitrogen). After ligation of the inserts, the plasmids were electroporated into DH10B bacteria. Preliminary
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            contain long poly(dA) tails. /note="Organ: Left Pubic Bone; Vector: pT7T3-Pac
(Pharmacia) with a modified polylinker; Site_1: RooR I;
Site_2: Not I; NCI_CGAP_ED1 is a normalized cDNA library
containing the following tissue(s): Chondrosarcoma cell
line CS5. The library was constructed according to
Bonaldo, Lemnon and Soares, Genome Research, 6:791-806,
1996. First strand cDNA synthesis was primed with an
oligo-dT primer containing a Not I site. Double stranded
cDNA was ligated to an EcoR I adaptor, digested with Not
I, and cloned directionally into pT7T3-Pac vector. The
oligonuclectide used to prime the synthesis of
firsts-strand cDNA contains a library tag sequence that is
located between the Not I site and the (dT)18 tail. The
sequence tag for this library is GCTCAAGGCT.

/note="Organ: Eye; Vector: pSPORT1; The cDNA,
directionally cloned in the pSPORT1 vector (Life
Technologies, Rockville, MD), was constructed at Bioserve
Biotechnology (Laurel, MD) was constructed at Bioserve
Biotechnology (Laurel, MD) essentially following the
protocols of the SuperScript plasmid System full details
of which are contained in the manufacturer's Instruction
manual (http://www.lifetech.com/). Sublibraries
(designated ho, hp, and hq) were made from the first three
35-uL fractions of cDNA from a Sephacryl S-500 HR resin
column. EST analysis was performed on the unamplified
library at the NIH Intramural Sequencing Center(NISC)."
